Dale,

After reading this very good article about silver, I have a couple of questions for you.

The first one is in regards to how your silver is made. I thought that you told me you use the electrical charge method and this article is not very flattering to this method (see excerpt below). I do recall your silver being about 7-9 ppm and that is was also clear as water and not dark as mentioned below.

“The issue is complicated by the fact that not all colloidal silver products are of the same quality. Products made at home or by the use of electrical charges to ionize and suspend the silver are products not worth taking. They are typically clear in color, are lucky to have any potency after two weeks, and run a much higher risk for silver depositing in the skin (argyria).

“True silver colloids are very difficult to make. They are brownish in color as the silver particles block light. The chances of them causing argyria, even with long-term use, are remote.”

The second question I have would be to see if you could get this article on the silver web page like the other one you put on there for me. I have edited the email that you sent me and attached a .doc and .pdf file of the cleaned up version for your review and possible posting.

I would however like to make sure that the method you are using is one that this author condones before we put the article on the web page.

Keep Smiling,  
Matt Trusskey

Matt,

Thank you for asking this question. I am especially appreciative you asked it the manner you did which shows an open mind and a proclivity towards the scientific method - a rarity these days.

We know "Our Silver Works" ("OUR SILVER WORKS" (OSW)) works over time by people such as yourself, who have used it over a month's time with positive results. Dr. Flick, who has used colloidal silver in his clinic for over 15 years at the time he tested our product (1996), said it was the best he had ever tested. Dr. Flick compiled the bibliography on silver and colloidal silver in medical use found here:

Medical Silver Bibliography

<http://www.svpvriil.com/AgBIBLIO.html>

The process we use to make OSW is unlike any other process used by any other manufacturer. Their process is based on the idea that it is the silver METAL or ion that is the curative or active agent. This idea is only partially true. Their other idea that a certain

"optimal" quantity of silver ions contributes to efficacy of the colloidal silver. This idea is also incomplete.

Our unique proprietary process uses several techniques in combination.

1 - An electrical current is used but this current is different from anyone else's. OSW utilizes a high frequency low amplitude AC current. As you know, most other systems use a fairly high amplitude high power DC current from batteries or rectified AC current. Our system is gentler and more subtle and does not drive the water into vibratory hysterics.

2 - A magnetic polarization of the water and electrodes is used in OSW products. This makes use of Walter Russell's Principle of Regeneration to 1) polarize the water and 2) energizes the water molecules. This is an important feature as each cell in the body is as a tiny battery having two electrical poles. This polarization of the cells allows them to function effectively within itself and with each other. Sometimes this polarization weakens and consequently cell function is diminished thereby decreasing cell and organ function. Our system restores this cellular polarization.

Principle of Regeneration

<http://pondscienceinstitute.on-rev.com/svpwiki/tiki-index.php?page=Principle+of+Regeneration>

3 - The OSW system introduces "grounding" energy as a complement to the high frequency low amplitude AC current thus establishing a balanced energy configuration. This secondary energy state is applied in a way so as not to short-circuit the electrical processes but instead enhances the overall polar electrical/magnetic effects. This dual process establishes a more holistic (electrically balanced) approach as compared to using only entropic electrical effects, which are essentially unbalanced perturbations.

4 - In OSW products, the silver content of OSW is not in parts per Million but in parts per Billion (one thousand times LESS). OSW can never ever cause argyria. Our silver particles are very fine thus holding themselves in suspension and will not fall out of solution over time; therefore, the silver does not require complex protein carriers. Hence, the argument effective colloidal silver must have color is not accurate. OSW is colorless because it is not polluted with protein or other additives of any kind. While many believe efficacy is caused by silver METAL in solution this is not entirely the case. We believe the causative agent in colloidal silver is the VIBRATIONS of the silver that are the effective agent. Hence, massive amounts of silver ions (potential argyria) is not an essential factor as much as pure silver vibrations - which our products have. This is an effect not unlike what is found in homeopathy.

5 - The work of Dr. Emoto of Japan has been gaining in worldwide popularity. His work demonstrates a power of thought or mind at work in modulating water. In essence, he shows rather conclusively positive thoughts have positive effects on water. A part of our system has been modulated with positive thought or heart energy in such a way as to impart harmonically positive thought vibrations to the water.

NOTE: That the Mind or Consciousness has power over or in Matter was thoroughly researched and proven to exist. The Princeton Engineering Anomalies Research (PEAR) program was established at Princeton University in 1979 by Robert G. Jahn, then Dean of the School of Engineering and Applied Science, to pursue rigorous scientific study of the interaction of human consciousness with sensitive physical devices, systems, and processes common to contemporary engineering practice. Over the next 28 years, an interdisciplinary staff of engineers, physicists, psychologists, and humanists has conducted a comprehensive agenda of experiments and developing complementary theoretical models to enable better understanding of the role of consciousness in the establishment of physical reality.

The above is a description in brief of the OSW system. If you have more questions, do not hesitate to ask.
